## Professional Work Experience

### Senior Backend Engineer

Trazi - remote

May 2021 – Sep 2023

- Develop secure, performant, big data, backend services using NodeJS, Fastify, ScyllaDB, PostgreSQL, Redis, etc.

- 20-30% of time spent penetration testing, performing application assessments and developing DAST solutions.

- Product owner of both billing and authentication services. Maintain various open-source projects.

### Full Stack Engineer

Ubiquity Internet [sic] - remote

May 2020 - May 2021

- Modern web application development using NodeJS, Express.js, MongoDB, Angular, Vue, React Native.

- Wrote custom RouterOS scripts to interface with CMS and network monitoring systems (Mikrotik, fiber and wireless networks). Offered top-tier support for company network technicians.

### Full Stack & Mobile Engineer

Flare Software & various contracts - remote

Dec 2010 - May 2020

Contract work developing and distributing software. Full stack web development using HTML, CSS, JavaScript, PHP, Vue, SpringBoot, MongoDB, Netlify. Native mobile application development (iOS and Android) using Swift, Java, SQLite, MySQL, React Native, etc. Graphic design work using GIMP. And a lot of tinkering.

### Q/A Engineer

Harman International - South Jordan, UT

Oct 2013 - Jun 2014

Created Q/A test plans, managed bug reports with Bugzilla, and black box testing on hardware and software.
